Specialist Fire Training Facilities

GENERAL CABINS MANUFACTURES BESPOKE SOLUTIONS TO MEET THE SPECIALIST DEMANDS FOR FIREFIGHTER TRAINING.

Not many companies can claim they are helping to save lives but that is the case for County Tyrone-based General Cabins. The steel enclosures manufacturer has, over the years, earned a reputation for delivering accommodation and storage facilities that meet the exacting needs of the company's vast client base.

But providing new training facilities for Dorset Fire & Rescue Service proved to be a more unusual request for the company.

"However, it's something that we are doing a lot more of," explained Peadar Hughes, Managing Director, General Cabins. "A number of years ago we were commissioned by the Donegal Fisheries Training College to provide a Fire and Rescue Training complex, so having that experience behind us made meeting the needs of the Dorset Fire & Rescue Service a lot easier.

"For both jobs, we manufactured and supplied specialist

facilities to not only meet the needs of the customer but also conform to stringent international standards.

"These were both very challenging contracts but also very pleasing to work on, especially bearing in mind that our specialist facilities are helping to save lives."

Meeting the needs of clients such as Dorset Fire & Rescue Service is nothing new to General Cabins as the company is well equipped to provide quality accommodation that is built to last.

General Cabins has been specialising in designing and manufacturing steel enclosures for a wide range of clients in different industry sectors for more than 25 years now.

GeneralCabins

From its manufacturing base near Dungannon in County Tyrone, the company produces a range of vandal proof accommodation that meets the needs of both the home and export markets.

The company's range of Secure Office, Secure Storage, Secure Power and Secure Towable accommodation is well established and designed to provide clients with 'long life' solutions to their accommodation needs.

But as well as its standard range of mobile and static steel enclosures, the company also specialises in bespoke solutions.

"Just tell us what your requirements are and we will accommodate those needs," added Peadar.

"Quality materials are used throughout and we remain market-competitive by continually designing new processes and sourcing new products." The flexibility of the company's off-site construction processes means that it can quite literally deliver the finished product within very challenging time-frames. General Cabins & Engineering is approved by Lloyd's Register to manufacture a range of ISO standard shipping and specialised container enclosures.

This benchmark for design and workmanship is maintained throughout the construction of every General Cabin unit. Demand for specialised steel enclosures has grown considerably in recent years as more and more clients are becoming increasingly aware of the sustainability credentials of this building form.

"The thought of steel enclosure buildings as only being temporary solutions to accommodation needs has all but disappeared," continued Peadar.

"Whether a client is looking for a building that will be situated in a remote location or towable secure site accommodation that will be used to comply with building regulations, they want it to last and at General Cabins all our accommodation is built to last."
